

Methane Intensity Average for Methane Performance Certificate Onboardings

Data is now available for the market to incentivize the low emission molecule by a wide margin

- Assets onboarded for MPCs to date have a volume weighted average methane intensity (MI)⁴ of 0.0622%, providing a supply source that is significantly below the US and global average emissions intensities

- Volume weighted average of all the assets onboarded to-date (12 assets in North America)
- Current MPC benchmark as estimated by Platts - 0.437%
- Derived from *bp Statistical Review of World Energy* and *IEA Methane Tracker*; 2019 production and emissions data
- Defined as the ratio of methane emissions to natural gas produced
